

# Equipment - Oscilloscope

## Task 1

- Turn on the bench top power supply and set the voltage at 5V.
- Connect the black lead of power supply to ground lead of oscilloscope probe.
- Connect the red lead of Power supply to main oscilloscope probe head. (you may push the cap down to let the little metal clip to appear)
- Do the required setup for corresponding oscilloscope channel.
- Measure the voltage using the grids on the screen.
